

## **Assignment 2 - authentication on web-based systems**

Write a report that contains the following:

- 1. The username and password of one regular user account.**
  - a. Admin
    - i. Username: drramirezra
    - ii. Password: 123
  - b. You can add another user to test it under the sign-up tab.
    - i. There are only two roles, admin and user.
    - ii. You can copy and paste an URL for the profile picture.
- 2. How long you spent to do this assignment?**
  - a. 2 days but I had problems with the server and I still fixing it.
- 3. The name of the directory where your files are.**
  - a. <https://cssrvlab01.utep.edu/Classes/cs5339/drramirezra/>
- 4. What problems (if any) did you encounter in this assignment, and if yes, how did you solve the problems?**
  - a. The problems I am fixing are with the server because it returns a 500 error. It looks like the session variables are not working correctly.
- 5. Comment on how useful this assignment was to learn about authentication on web-based systems.**
  - a. This assignment was very very useful in terms of working with HTML, PHP and SQL. One of the best practices and essential things of web development. I loved it.
